Forms for Campus Event & Participation Management System

Aim:

To design and develop a set of interrelated data collection forms for a Campus Event & Participation Management System using a low-code application development platform.

Procedure:

1. 1. Student Form Creation:

Create a form named "Student" to capture participant details. Add fields such as Student ID (Auto Number), Student Name, Register Number, Student E-Mail, Phone, Department, Year, and Section.

The screenshot displays a low-code application development platform interface for creating a form named "Student". The form is part of a project titled "Campus Event & Participation M...". The form fields are listed as follows:

- Student ID (Auto Number)
- Student Name
- Register Number
- Student E-Mail
- Phone
- Department
- Year
- Section

The interface also includes a "Basic Fields" panel on the left with various field types like Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, and Multi Select. The "Field Properties" panel on the right shows the configuration for the "Student ID" field, including its name, link name, validation, and appearance.

2. 2. Event Form Creation:

Create an "Event" form to define the campus events. Include fields for Event ID (Auto Number), Event Name, Event Type, Description, Event Date, Start

Time, End Time, Venue, Maximum Participants, Organizer, and Event Status.

The screenshot shows the 'Event' form creation interface. On the left, a 'Basic Fields' panel lists various field types: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, and Multi Select. The main area displays the form fields for an 'Event': Event ID (with a trash icon), Event Name, Event Type, Description, Event Date, Start Time, End Time, Venue, Maximum Participants, Organizer, and Event Status. On the right, the 'Field Properties' panel for 'Event ID' shows: Field name (Event ID), Field link name (Event_ID), View Field References, Validation (Start Index: 1), Appearance (Field type: Auto Number), and a 'Done' button. The bottom status bar indicates 'Trial has expired | Upgrade' and 'Help'.

3. 3. Registration Form Creation:

Develop a "Registration" form to link students to events. Include lookup fields for Student and Event. Add fields for Registration Date, Participation Type, Registration Status, Registration Timestamp, Is Payment Required, Payment Status, and Additional Notes.

The screenshot shows the 'Registration' form creation interface. On the left, the 'Basic Fields' panel is the same as in the previous image. The main area displays the form fields for a 'Registration': Student (with a trash icon), Event, Registration Date, Participation Type, Registration Status, Registration Timestamp, Is Payment Required, Payment Status, and Additional Notes. On the right, the 'Field Properties' panel for 'Student' shows: Field name (Student), Field link name (student), View Field References, Validation (Mandatory and No duplicate values checkboxes), Initial value (Initial value), Character maximum (255), Data Privacy (Contains personal data checkbox), Data Security (Encrypt data and Contains health info checkboxes), and User Input (for mobile). The bottom status bar indicates 'Trial has expired | Upgrade' and 'Help'.

4. 4. Attendance Form Creation:

Build an "Attendance" form to track check-ins. Incorporate lookup fields for Registration, Student, and Event. Add fields for Attendance Date, Attendance Status, Check-in Time, Check-out Time, Remarks, and Created By.

The screenshot shows the 'Attendance' form creation interface. The 'Basic Fields' panel on the left lists various field types: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, and Multi Select. The main area displays a list of fields for the 'Attendance' form: Registration (lookup), Student (lookup), Event (lookup), Attendance Date, Attendance Status, Check-in Time, Check-out Time, Remarks, and Created By. A 'Field Properties' panel on the right shows settings for the 'Registration' field, including Field name, Field link name, Validation, Initial value, Character maximum, Data Privacy, and Data Security.

5. 5. Certificate Form Creation:

Design a "Certificate" form for issuing credentials. Use lookup fields for Student and Event. Include fields for Certificate Number, Certificate Type, Issue Date, Certificate Status, Certificate File (File Upload), Remarks, and Generated By.

Campus Event & Participation M...
Certificate

Basic Fields

- Name
- Email
- Address
- Phone
- Single Line
- Multi Line
- Number
- Date
- Time
- Drop Down
- Radio
- Multi Select

Student

Event

Certificate Number

Certificate Type

Issue Date

Certificate Status

Certificate File

Remarks

Generated By

Field Properties

Field name

Student

Field link name

student

View Field References

Validation

☐ Mandatory ☐ No duplicate values

Initial value

Initial value

Character maximum

255

Data Privacy

☐ Contains personal data(PII)

Data Security

☐ Encrypt data

☐ Contains health info(ePHI)

User Input (for mobile)

Trial has expired | Upgrade

Help

Conclusion:

The structural forms for the Campus Event & Participation Management System were successfully designed and implemented. By utilizing a low-code platform, distinct modules for managing students, events, registrations, attendance, and certificates were successfully created and interlinked to streamline campus event operations.
