Exercise 11

Portal User

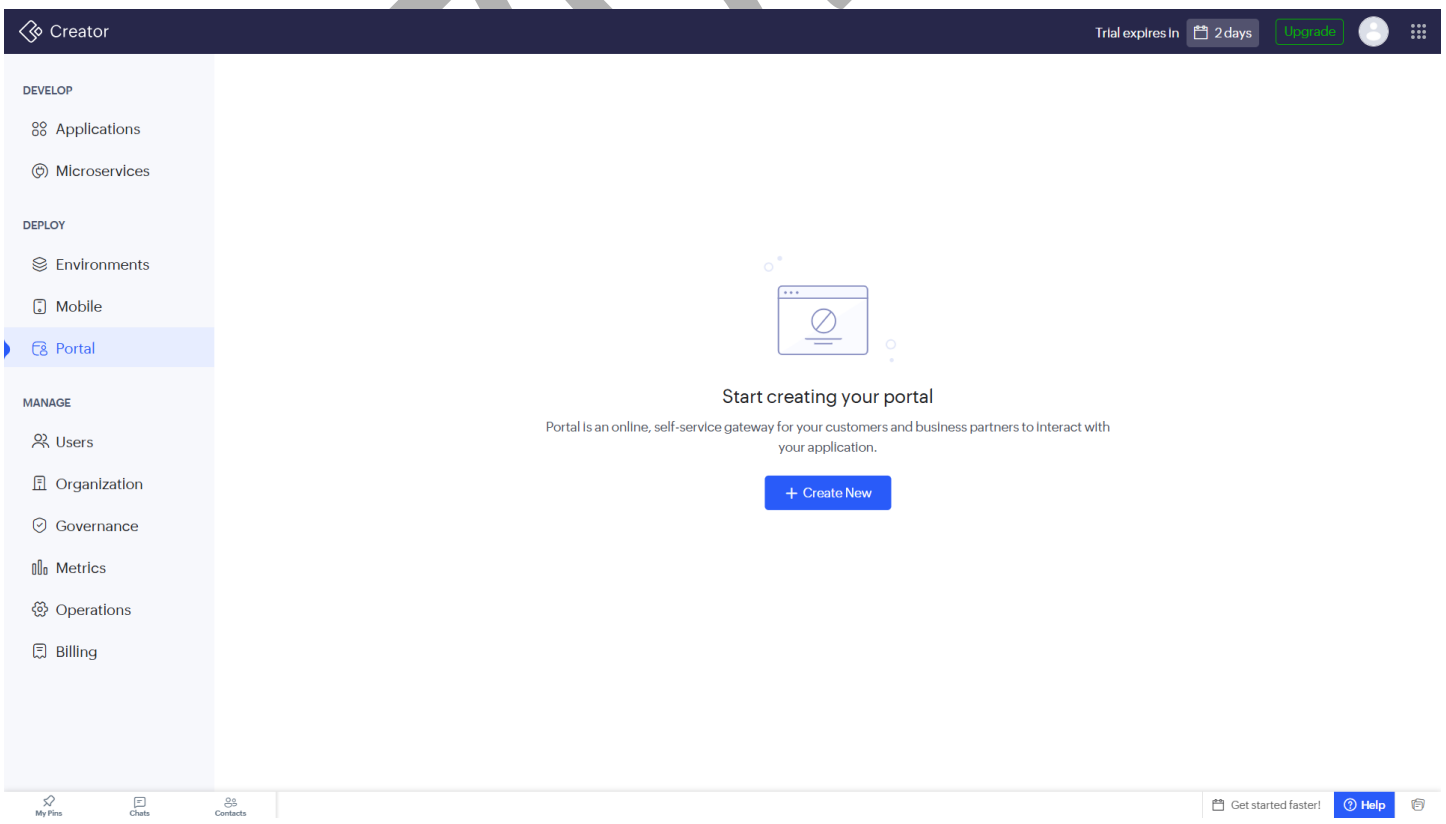

Application Name: Vehicle Service Management System

Aim

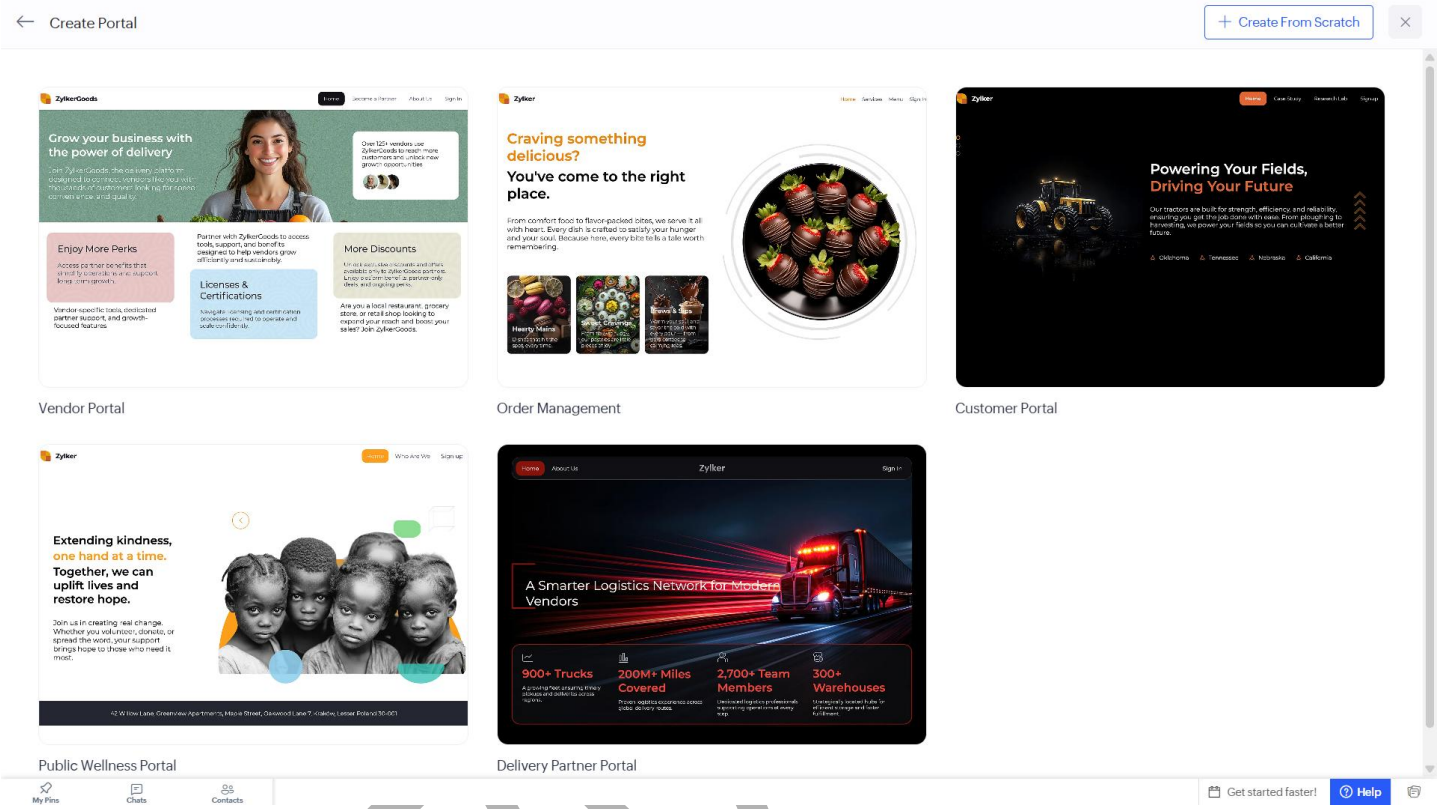

To design, configure, and deploy a self-service customer portal for the Vehicle Service Management System, enabling external users to register, authenticate, and securely submit service requests.

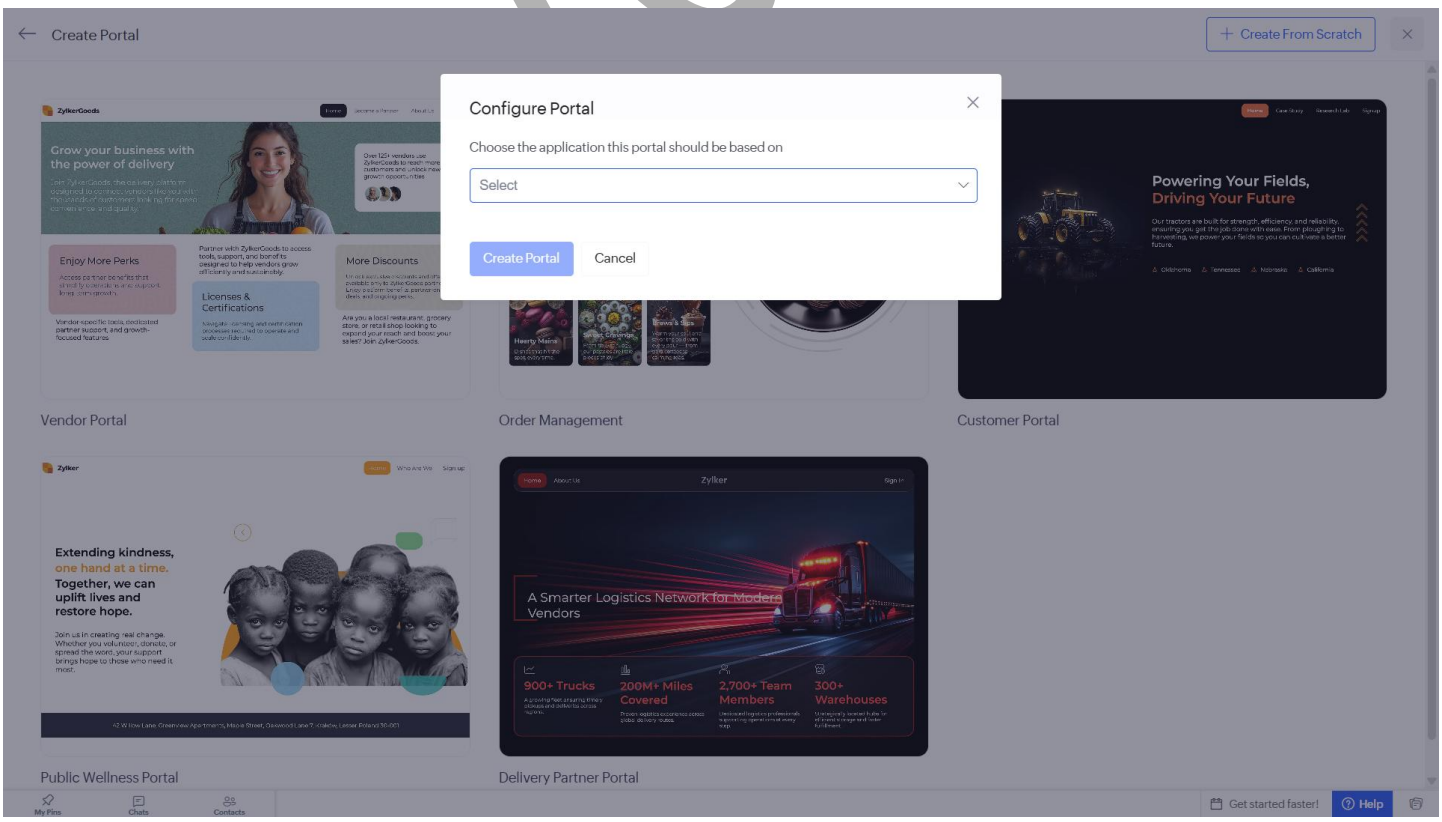

Procedure

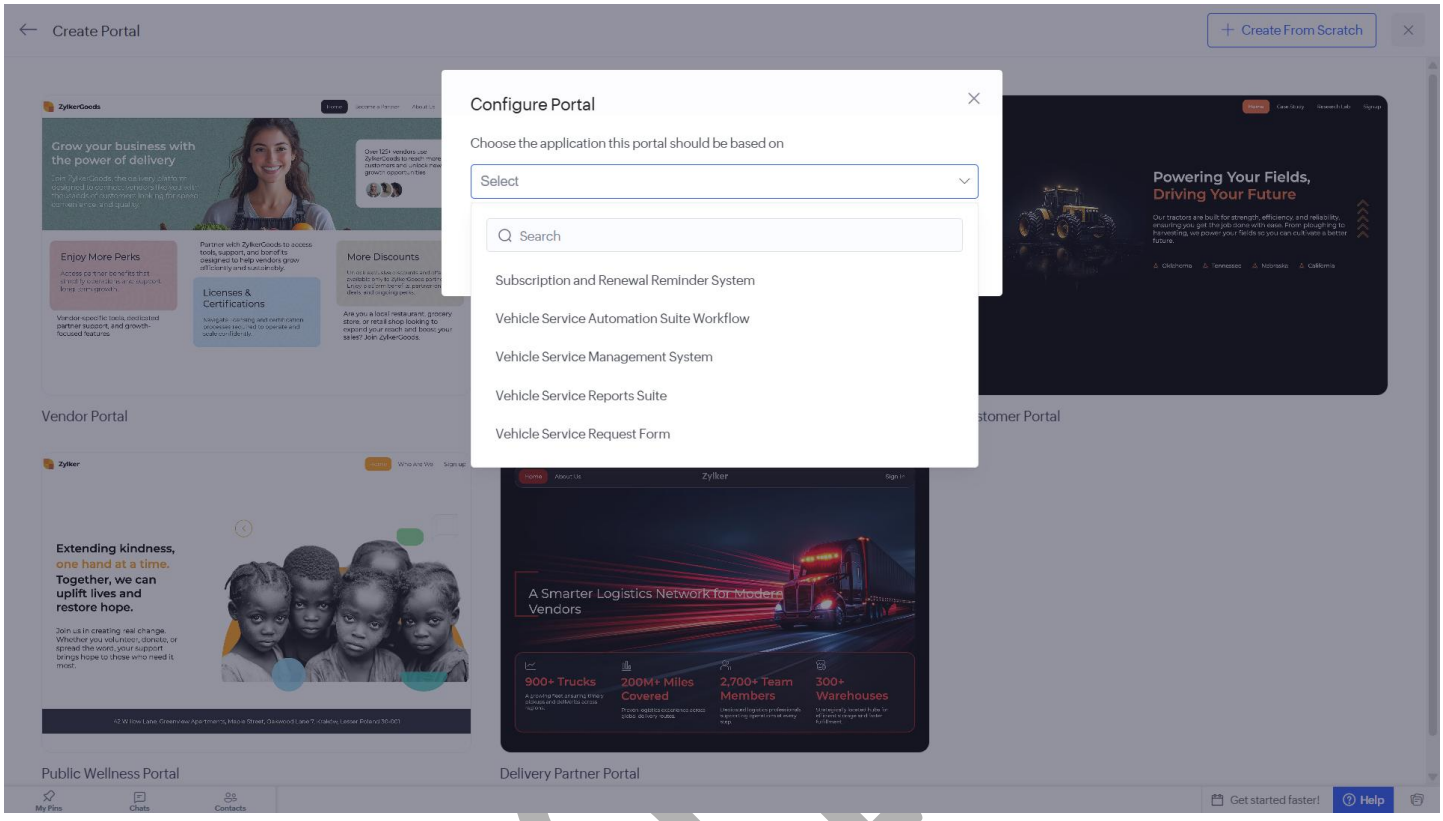

1. Navigate to the Portal tab under the Deploy section and click "Create New" to initiate the portal setup.

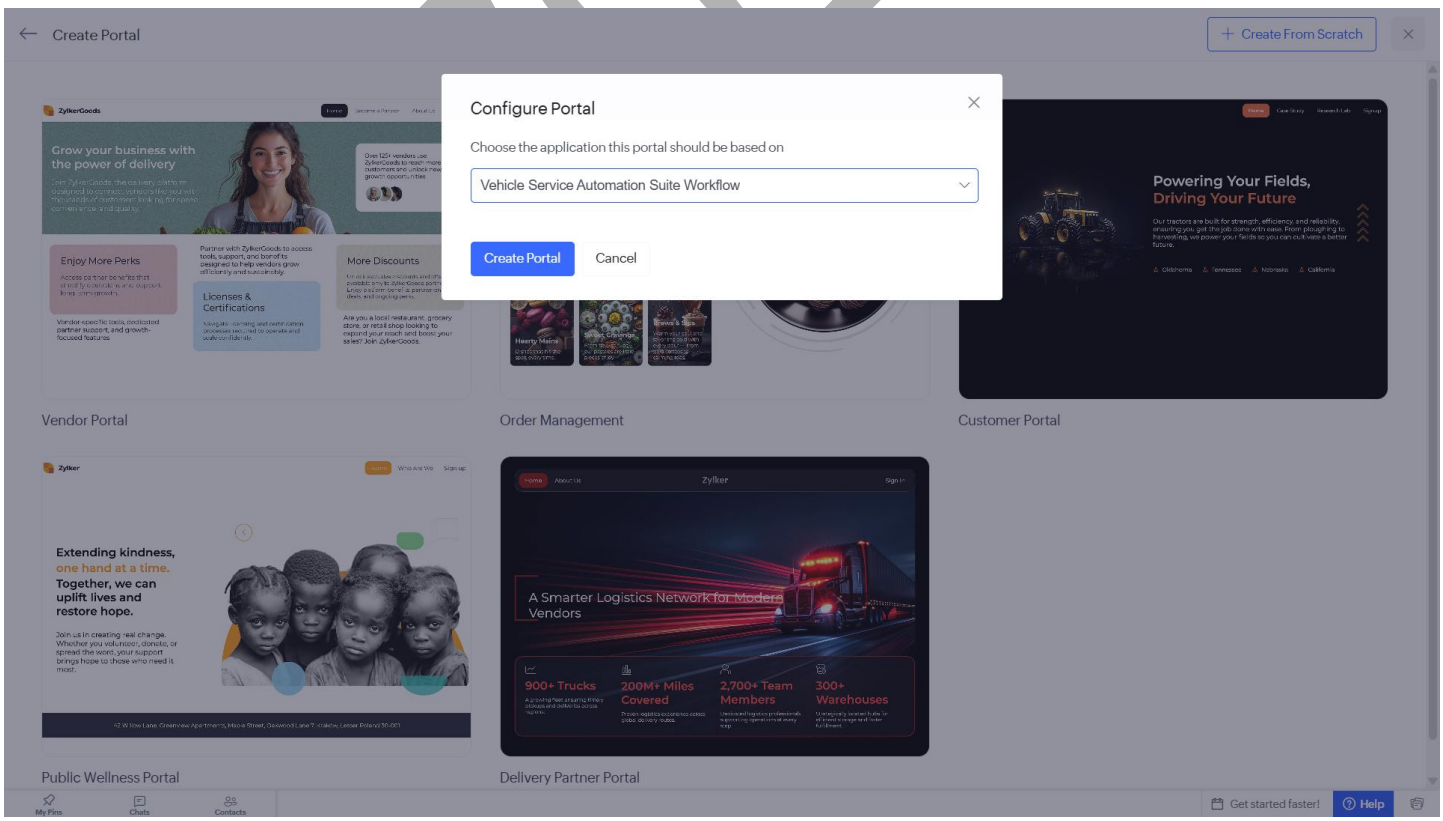

2. Choose a portal template or create one from scratch, then configure the portal by selecting the target application (Vehicle Service Management System / Vehicle Service Automation Suite Workflow).

Help

5. Enter the customer's email address and name, assign them the "Customer" permission, ensure "Send Notification Mail" is checked, and add the user.

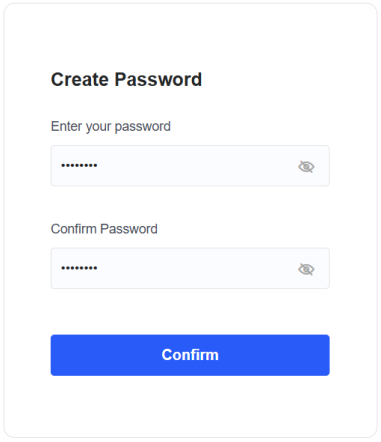

2407

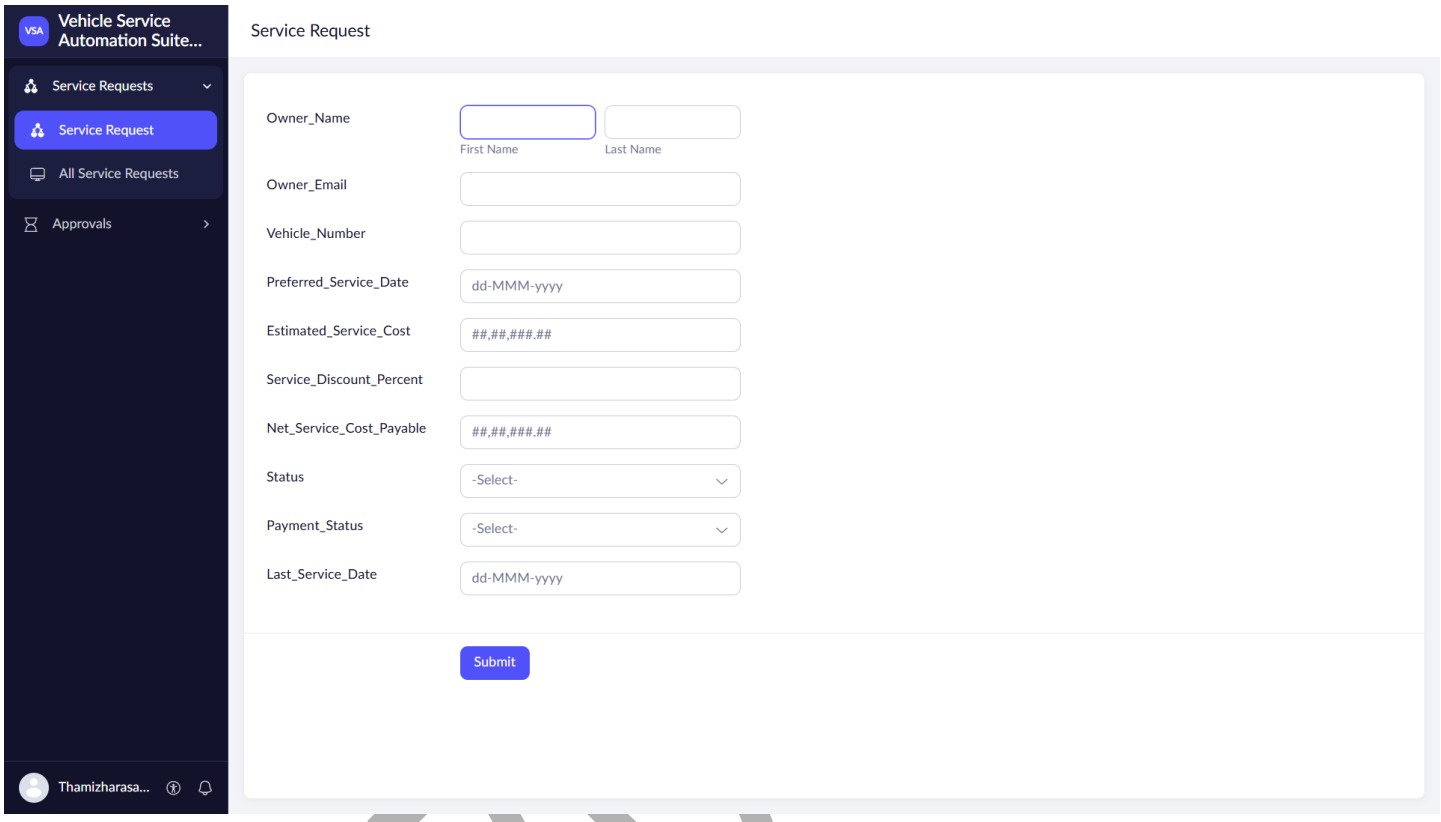

6. The customer receives an automated email invitation. They must click the "Create New Password" link within the email to complete the signup process.

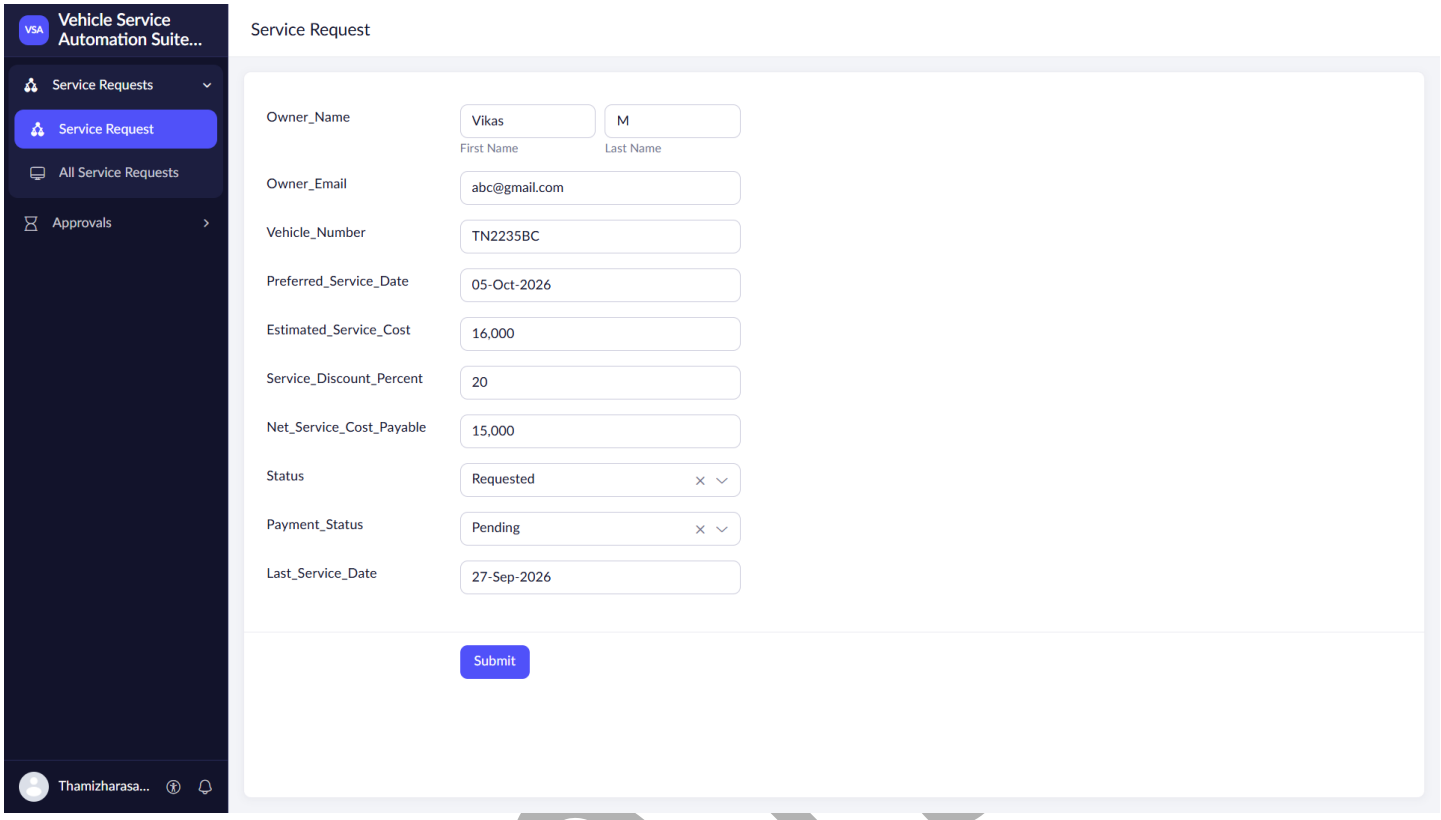

7. The customer is redirected to the portal to enter and confirm their new password.

8. After successfully logging in, the customer navigates to the "Service Request" module within the portal.

9. The customer fills out the Service Request form with required details (such as Owner Name, Vehicle Number, Estimated Service Cost, etc.) and submits the request.

Result

The self-service customer portal was successfully configured and deployed. External users were successfully able to receive portal invitations, register their accounts, log in securely, and submit service requests within the Vehicle Service Management System.
